CLAPHAM HIGH STREET GREENING

YOUR CLAPHAM

A VISION FOR CLAPHAM HIGH STREET

LAMBETH COUNCIL + TRANSPORT FOR LONDON + BID

OCTOBER 2016

A site visit was undertaken to ascertain potential locations for additional trees. This established that there are entire sections filled with utility covers where trees in planters could be the viable solution and sections where street furniture such as cycle parking, 'A' boards, bins and sign posts are prevalent. A decluttering study and rationalisation of the street furniture could result in more space for trees.

A few gaps have been identified where trees could be planted, however this needs to be confirmed by further underground investigations. The high street narrows considerably towards Clapham Common where it

also becomes busier with pavement cafes resulting in fewer opportunities for greening.

We have also included the findings of a TfL study completed in 2014 where out of 11 trial holes only two have shown conflicts. Some trees appear to have been planted since then and we have included five other locations which haven't.

Other opportunities for planting will need to be looked at, for example installation of green walls on inactive frontages.

POTENTIAL FOR
48 NEW PLANTED TREES - SUBJECT TO FURTHER INVESTIGATION
25 NEW TREES IN PLANTERS - SUBJECT TO STAKEHOLDER AND MAINTENANCE REGIME AGREEMENT
3 NEW GREEN WALLS - SUBJECT TO STAKEHOLDER AGREEMENT
